

Decentralized multi-chain protocol to maximize profits from DeFi.

DeHive protocol provides smart asset management of tokenized portfolios through accumulating them into Clusters. Joining the Cluster means reducing the risks of volatility and getting the Yield from DeFi protocols.

Key Features:

- DeFi Yield on your Portfolio
- Multi-chain portfolio management
- Platform native staking rewards
- Weighted sets of assets used as Indexes

Partners & Integrations

Roadmap

- Q2, 2021 - IDO and Uniswap pool launch
 - Q3, 2021 - functional beta release
 - Q4, 2021 - BSC integration & functional MVP
- 01
 - 02 Functional MVP launch
 - 03
 - 04 First ETH-Core Cluster release
 - 05 Polygon integration & second Cluster launch
 - 06 INITIAL PLATFORM LAUNCH [staking & yield farming strategies] - in progress
 - 07 DHV staking rewards inside the platform
 - 08 DAO initial launch
 - 09 Third Cluster release
 - 10
 - 11 Forth Cluster release
 - 12 Prototype for Polkadot launch

How DeHive works:

DeHive Leaders:

Sergey Onyshchenko
